Tagline: Building production-grade mobile and AI products for the African market.

About Me

Android developer with 3+ years of production experience building mobile applications and digital products for the African market. Solo founder of Lovinex, a luxury dating app engineered natively for Android using Kotlin, Jetpack Compose, Firebase, and Clean Architecture. Founder of Krespo Labs, a digital products studio building AI-powered tools, prompt systems, and automation products for African creators and developers. No formal CS degree — every skill acquired through shipping real products to real users. Comfortable working across mobile, backend, web, and AI tooling. Strong experience evaluating technical correctness, architectural decisions, and reasoning quality in software engineering contexts.

Project: Lovinex Android

Type: Native Android Application | Status: Active Development

Description:

Lovinex is a luxury dating app built natively for the African market. Engineered from the ground up for performance, real-time interaction, and scale from 100K to 100M users.

Tech Stack:

- Language: Kotlin
- UI: Jetpack Compose
- Architecture: Clean Architecture + MVVM
- Backend: Firebase Firestore, Firebase Auth, Firebase Storage
- Async: Coroutines and Flow
- Push Notifications: OneSignal SDK 5.4.1
- Cloud Functions: Firebase Gen 2
- Email: Resend API

Key Engineering Work:

- Built custom 6-digit OTP email verification replacing Firebase default flow
- Implemented real-time mutual-like matching with race condition handling
- Deployed production Firestore security rules with role-based access
- Built FeatureFlags system for phased paywall rollout
- Eliminated cold-start latency using minInstances on Cloud Functions
- Integrated OneSignal with FCM V1 for push notifications

Project: KrespoAI Hub

Type: React Web Application | Status: Live in Production

Description:

Nigeria-first AI SaaS platform providing AI-powered tools, prompt packs, and automation systems for African creators and entrepreneurs.

Tech Stack:

- Framework: React + Vite
- Language: JavaScript JSX
- Deployment: Vercel

Live URL: <https://krespoai-hub.vercel.app>

GitHub: <https://github.com/Krespolabs/Krespoai-hub>

Project: Lovinex Web

Type: Next.js Web Application | Status: Active Development

Description:

The web experience for Lovinex — built with Next.js 14 App Router and TypeScript for performance and scalability.

Tech Stack:

- Framework: Next.js 14
- Language: TypeScript
- Architecture: Component-based, hooks-driven
- Deployment: Vercel

GitHub: <https://github.com/Krespolabs/Lovinex>

Coding Challenges

Challenge 1: Real-Time Mutual Like Matching

Built a Firestore-based matching system that detects mutual likes atomically, handles race conditions using transactions, and generates deterministic match IDs to prevent duplicate documents at scale.

Full challenge: [Link to Challenge](#)

Challenge 2: Custom OTP Email Verification

Replaced Firebase default email verification with a custom 6-digit OTP flow using Cloud Functions Gen 2 and Resend API. Handles expiry, attempt limits, and server-side code comparison for security.

Full challenge: [Link to Challenge](#)

Skills

Mobile: Kotlin, Jetpack Compose, Android SDK, MVVM, Clean Architecture

Backend: Firebase, Firestore, Cloud Functions, Resend API

Web: Next.js, React, TypeScript, Vite

AI: Claude API, OpenAI, Prompt Engineering

Tools: Git, GitHub, Vercel, Netlify, Hilt, Coroutines
